

NeuroFedora

Free Software for Free Neuroscience

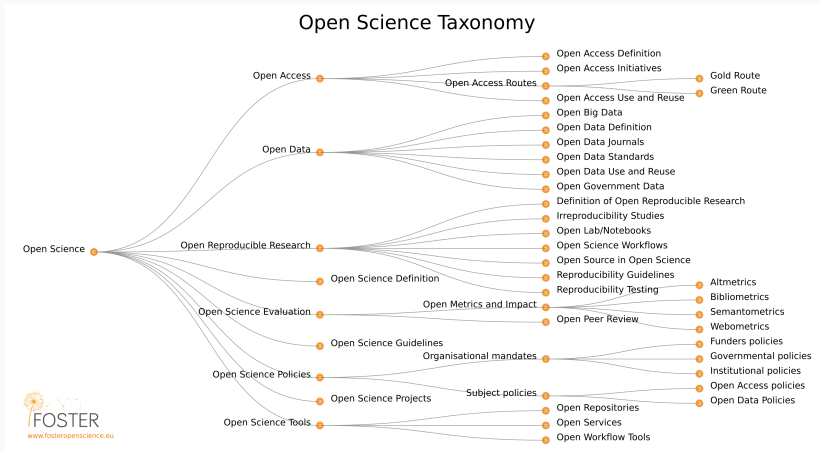

Ankur Sinha

Ph.D. candidate: UH Biocomputation Group, UK,

Volunteer: Fedora Project.

Free/Open (neuro) Science

Modern Free/Open Science

¹Petr Knoth and Nancy Pontika (CC BY 3.0)

The ideal, in short:

Free/Open Science:

Everyone should have the freedom to share, study, and modify scientific material.

²Free software foundation

The ideal, in short:

Free/Open Science:

Everyone should have the freedom to share, study, and modify scientific material.

Free/Open Science includes and relies heavily on Free/Open Source Software (FOSS).

²Free software foundation

The ideal, in short:

Free/Open Science:

Everyone should have the freedom to share, study, and modify scientific material.

Free/Open Science includes and relies heavily on Free/Open Source Software (FOSS).

FOSS:

Everyone should have the freedom to share, study, and modify software⁵.

²Free software foundation

⁶Open source for neuroscience

NeuroFedora: why, how, what?

FOSS: Developers and users

Neuroscience community: highly multidisciplinary

- **various specialities:** biologists, mathematicians, physicists, chemists, psychologists, ... ,

Neuroscience community: highly multidisciplinary

- various specialities: biologists, mathematicians, physicists, chemists, psychologists, ... ,
- small proportion of trained software developers,

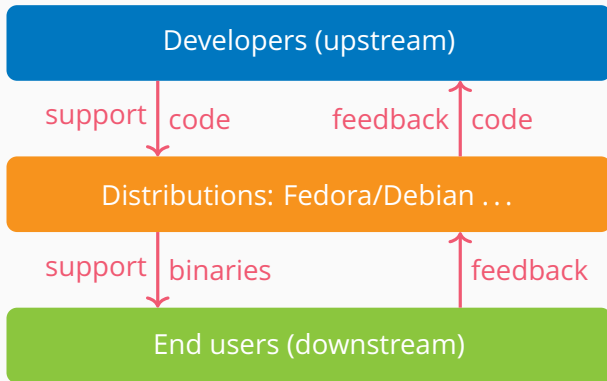

(Anecdotal) notes on development of research software

- often **single developer**, or small development teams,
- limited **maintenance**, short-lived projects,
- limited **access to hardware/resources**,
- limited **code quality**,
- limited **use of established best practices**,
- limited **testing for correctness (!)**,
- **complex dependency chains**,
- lack of **documentation and support**,
- lack of **community development know-how**,

(Anecdotal) notes on users of research software

- waste time and effort installing (and reinstalling) their software stacks,
- rarely run test suites (!),
- rarely report bugs upstream,
- rarely send improvements upstream,
- are unaware of helpful development tools,

Distributions liaison between developers and users

Distributions, like Fedora, are in a unique position:

- liaison between upstream and users,
- have the infrastructure,
- follow best practices in software development,
- constantly work community development,
- learn from one another—train while working,
- disseminate information to end-users,

Primary goal:

- Provide a ready to use, integrated FOSS platform for neuroscientists⁷.

⁷ Researchers, academics, hobbyists, anyone!

Primary goal:

- Provide a ready to use, integrated FOSS platform for neuroscientists⁷.

Secondary/collateral goals:

⁷ Researchers, academics, hobbyists, anyone!

Primary goal:

- Provide a ready to use, integrated FOSS platform for neuroscientists⁷.

Secondary/collateral goals:

- help improve the standard and maintenance of tools,
- help users develop software development skills,
- make neuroscience accessible to non-specialists,

⁷ Researchers, academics, hobbyists, anyone!
